

Hospice Roadmap

Replit & Git Recovery Log

Prepared for: Nick Lynch / Thordadpool5413
Project: Hospice-Roadmap (Expo mobile + Replit API)
Repository: github.com/Thordadpool5413/Hospice-Roadmap
Final fix commit: 81854bc | **Log commit:** dfe7331

1. Root Problems

Problem	Cause
TestFlight app looked "old"	EAS baked in Vercel API, not Replit
Merge conflicts in Replit	Replit had app.config.js; GitHub uses app.config.ts
git push failed from Replit	OAuth token lacks workflow scope for CI files
Submit "failed" but build showed	Build 64 already uploaded; duplicate submit error
"Replit fixes" unchanged app	Commits only touched images/eas.json, not real fixes
Replit "Published your App"	Auto-commit replaced icons; did not wire splash.png

2. GitHub / EAS Fixes (Before Replit Sync)

CI & iOS build:

- Fixed pnpm version conflict in GitHub Actions
- Fixed monorepo typecheck
- Added expo-build-properties `ios.useFrameworks: "static"` (Clerk pod fix)
- Hardened `.github/workflows/eas-build.yml`

App Store Connect (ASC) API key:

- Updated `artifacts/mobile/eas.json`
 - Key ID: `RN36YUWW26`
 - Key path: `attached_assets/AuthKey_RN36YUWW26.p8`
 - Issuer ID: `b6126ce7-eea8-4ad4-a1b5-3b718912f190`
 - ASC App ID: `6773936838`
- Fixed Expo ASC link (was wrong app `6773177246` and key `N6KS8S65GA`)
- Reconnected to correct ASC app with `RN36YUWW26`

Key commits: `c884694` , `e4fd4a0` , `0fcd47b`

3. Replit Merge Conflict Fix

Error: Conflicting files — `app.config.js`, `eas.json`, `package.json`, `pnpm-lock.yaml`

Clean reset (recommended):

```
git merge --abort 2>/dev/null || true
git fetch origin
git reset --hard origin/master
pnpm install
```

Alternative (keep Replit changes, exclude workflow):

```
git fetch origin
git reset --soft origin/master
git restore --source=origin/master --staged --worktree .github/workflows/eas-build.yml
git commit -m "Replit fixes (excluding CI workflow)"
git push origin master
```

Helper script: `scripts/resolve-replit-merge.sh`

4. Replit Git Push Blocked

Error: OAuth App cannot update `.github/workflows/eas-build.yml` without workflow scope.

Fix: Do not push workflow file from Replit, or push from Windows with full GitHub access.

5. TestFlight Pipeline

```
# Auth (skip eas login if EXPO_TOKEN is set)
npx eas-cli whoami

# ASC key on Replit
ls attached_assets/AuthKey_RN36YUWW26.p8

# Build
cd artifacts/mobile
npx eas-cli build --platform ios --profile preview --non-interactive

# Submit
npx eas-cli submit --platform ios --latest --profile production --non-interactive
```

Note: Build 64 was already VALID in App Store Connect; re-submit caused EAS error.

6. Wrong Backend URL

Setting	Wrong (old)	Correct (Replit)
API URL	hospice-roadmap-backend-olive.vercel.app/api	hospice-roadmap.replit.app/api
Domain	hospicesalespro.com	hospice-roadmap.replit.app

```
npx eas-cli env:update preview --variable-name EXPO_PUBLIC_API_URL \
  --value "https://hospice-roadmap.replit.app/api" --non-interactive
npx eas-cli env:update preview --variable-name EXPO_PUBLIC_DOMAIN \
  --value "hospice-roadmap.replit.app" --non-interactive
curl -s https://hospice-roadmap.replit.app/api/healthz
```

Do NOT use *.replit.dev for TestFlight (dev preview only).

7. Build History

Build	Commit	Notes
63	e4fd4a0	CI-hardened master
64	0fcd47b	ASC key; still Vercel API
65	55d0df0	Replit deploy; only tiny icon files
66+	81854bc	Splash + single paywall + Ragna voice

8. Code Fixes by Grok AI (81854bc)

A. Splash screen — `app.config.ts` now uses `splash.png` (cover), not `app-icon.png` .

B. Single subscription price — `paywall.tsx` shows one plan: "Hospice Roadmap Premium" (`companion_monthly`).

C. Ragna ElevenLabs voice — Single voice id `ragna` ; iOS preview via server TTS; requires ElevenLabs voice named `ragna` on deployed Replit.

9. Full Replit Workflow

```
cd ~/workspace && git pull origin master
curl -s https://hospice-roadmap.replit.app/api/healthz
cd artifacts/mobile
npx eas-cli env:list preview
npx eas-cli build --platform ios --profile preview --non-interactive
npx eas-cli submit --platform ios --latest --profile production --non-interactive
```

10. Common Errors & Fixes

Error	Fix
EXPO_TOKEN set / eas login fails	Skip login; use whoami
env:exec preview fails	Must include a command to run
Merge conflicts	reset --hard origin/master
Push workflow scope error	Exclude .github/workflows from push
Submit fails, build in ASC	New build; don't re-submit same ID
App unchanged on TestFlight	New build + correct API URL
Voice not ElevenLabs	Connect integration; voice named ragna

11. What Replit AI Did Wrong

1. Kept `app.config.js` while GitHub uses `app.config.ts`
2. "Published your App" commits without wiring new assets in config
3. Pushes without real feature/code fixes
4. Merge conflicts not resolved toward GitHub canonical source
5. Builds before API URL pointed at Replit production

Rule: GitHub master = source of truth → pull → fix → commit → push (exclude workflow from Replit) → EAS env → build → submit.
